A Handy Reference Book.

Students of American geology and geography one much to the four great government organizations which worked in the West between 1867 and 1873, before the establishment of the United States Geological Survey. These organizations are commonly known as the Hayden, King, Powell, and Wheeler Surveys, from the men in charge, of whom Clarence King later became the first Director of the United States Geological Survey and J. W. Powell the second. The publications of these earlier surveys constitute a storehouse of geographic, geologic, ethnologic, and archeologic information concerning the then almost unknown western portion of the United States and through their usefulness may have diminished as a result of more detailed surveys and more precise work, they are still invaluable to all who are interested in the study of the development of the West. The United States Geological Survey has published a catalogue and consolidated index of these publications by L. F. Schmuckebier, that will make the information they contain far more easily accessible. This catalogue, which is Survey Bulletin 222, is the only complete list of the publications ever issued and forms a handy reference book for students and librarians. A copy can be obtained free on application to the Director, United States Geological Survey, Washington, D. C.
